Dear Sir/Madam

Hearing proposal on revised criteria for Nordic Ecolabelling of floor care products

Nordic Ecolabelling gives you the possibility to comment on our proposal for revised criteria for floor care products.

The most important changes are:

- Impurities are encompassed by the requirements regarding CMR classified substances, volatile organic solvents and residual monomers in polymers.
- The requirement applicable to CDV calculation has been changed as a result of which CDV calculations must be available for all products. The level is set at 14000 with chronic data. We would like the opinion of the producers to where to set the requirement level and if there should be different requirement levels for different product types.
- The requirements applicable to dyestuffs have been clarified to include pigments.
- The requirement for perfume has been changed and is now excluded from all kinds of floor care products.
- A new requirement relating to nanomaterials/particles has been introduced.
- A form containing a declaration to be completed and signed by the producer of the floor care product has been extended. And a form for a declaration to be completed and signed by the raw material producer has been drafted.

We look forward to receive your comments on our proposal for revised criteria. The contact in Norway is Ingvild Kvien Bengtsson, and we ask you to send your comments no later than **27th of December 2011** by mail or email to: ik@ecolabel.no.

Yours sincerely
Ecolabelling Norway

Alvild Hedstein
Director
